

AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions and listings of claims in the application:

LISTING OF CLAIMS:

1. (original): A 2-allylcarboxamide derivative compound represented by the following formula (1);

wherein R¹, R² and R⁴ each independently represents a substituted or unsubstituted alkyl group containing 1 to 18 carbon atoms, a substituted or unsubstituted aryl group containing 6 to 20 carbon atoms or a substituted or unsubstituted aralkyl group containing 7 to 20 carbon atoms, R³ represents a hydrogen atom, a substituted or unsubstituted alkyloxycarbonyl group containing 2 to 20 carbon atoms, a substituted or unsubstituted aryloxycarbonyl group containing 7 to 20 carbon atoms or a substituted or unsubstituted aralkyloxycarbonyl group containing 8 to 20 carbon atoms, and *1 and *2 each indicates that the carbon atom marked therewith is an asymmetric carbon atom.

2. (original): The compound according to Claim 1,

Preliminary Amendment
National Stage of PCT/JP2004/005465

wherein R¹ is a substituted or unsubstituted aryl group containing 6 to 20 carbon atoms.

3. (original): The compound according to Claim 1,

wherein R¹ is a group selected from among phenyl group, 4-methylphenyl group, 4-methoxyphenyl group, 3-methoxyphenyl group, 4-nitrophenyl group, 4-chlorophenyl group, 4-bromophenyl group, 1-naphthyl group and 2-naphthyl group.

4. (currently amended): The compound according to claim 1~~any one of Claims 1 to 3,~~

wherein R² is a substituted or unsubstituted alkyl group containing 1 to 18 carbon atoms.

5. (currently amended): The compound according to claim 1~~any one of Claims 1 to 3,~~

wherein R² is methyl group.

6. (currently amended): The compound according to claim 1~~any one of Claims 1 to 5,~~

wherein R³ is a hydrogen atom.

Preliminary Amendment
National Stage of PCT/JP2004/005465

7. (currently amended): The compound according to claim 1 any one of Claims 1 to 5,

wherein R³ is phenyloxycarbonyl group.

8. (currently amended): The compound according to claim 1 any one of Claims 1 to 5,

wherein R³ is isopropylloxycarbonyl group.

9. (currently amended): The compound according to claim 1 any one of Claims 1 to 8,

wherein R⁴ is a substituted or unsubstituted alkyl group containing 1 to 18 carbon atoms.

10. (currently amended): The compound according to claim 1 any one of Claims 1 to 8,

wherein R⁴ is n-hexyl group.

11. (currently amended): The compound according to claim 1 any one of Claims 1 to 10,

wherein the asymmetric carbon atom marked with *1 has the R-form or S-form absolute configuration.

12. (currently amended): The compound according to claim 1 ~~any one of Claims 1 to 11,~~

wherein the asymmetric carbon atom marked with *2 has the R-form or S-form absolute configuration.

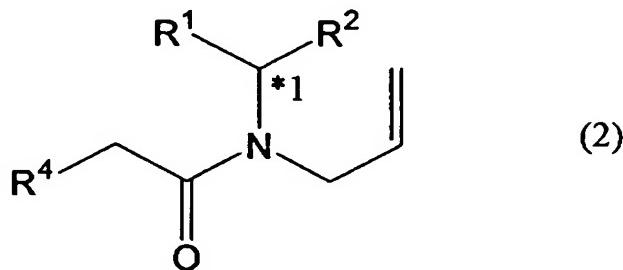

13. (original): A process for producing an optically active 2-allylcarboxylic acid represented by the following formula (5);

wherein R⁴ represents a substituted or unsubstituted alkyl group containing 1 to 18 carbon atoms, a substituted or unsubstituted aryl group containing 6 to 20 carbon atoms or a substituted or unsubstituted aralkyl group containing 7 to 20 carbon atoms and *2 indicates that the carbon atom marked therewith is an asymmetric carbon atom;;

which comprises:

- (a) reacting a carboxamide compound represented by the following formula (2);

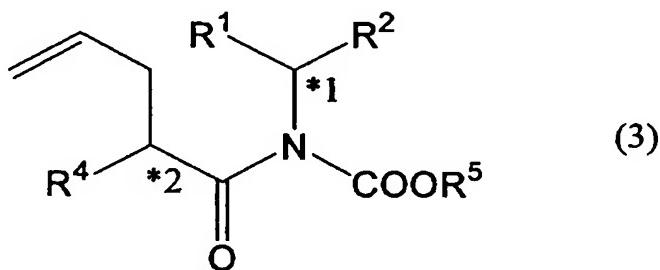

wherein R^1 and R^2 each independently represents a substituted or unsubstituted alkyl group containing 1 to 18 carbon atoms, a substituted or unsubstituted aryl group containing 6 to 20 carbon atoms or a substituted or unsubstituted aralkyl group containing 7 to 20 carbon atoms, R^4 is as defined above and *1 indicates that the carbon atom marked therewith is an asymmetric carbon atom;

with an organometallic compound and then further with a compound represented by the formula; ClCOOR^5

wherein R^5 represents a substituted or unsubstituted alkyl group containing 1 to 18 carbon atoms, a substituted or unsubstituted aryl group containing 6 to 20 carbon atoms or a substituted or unsubstituted aralkyl group containing 7 to 20 carbon atoms;

to give a 2-allylcarboxamide derivative represented by the following formula (3);

Preliminary Amendment
National Stage of PCT/JP2004/005465

wherein R¹, R², R⁴, R⁵, *1 and *2 are as defined above;,

(b) reacting the derivative (3) with a compound represented by the formula MOR⁶

wherein M represents an alkali metal and R⁶ represents a substituted or unsubstituted alkyl group containing 1 to 20 carbon atoms

to give a 2-allylcarboxylic acid ester derivative represented by the following formula (4);

wherein R⁴, R⁶ and *2 are as defined above;,

and

(c) further hydrolyzing the derivative (4).

14. (original): The process according to Claim 13,

wherein an organomagnesium compound is used as the organometallic compound.

15. (original): The process according to Claim 14,

wherein a tert-butylmagnesium halide is used as the organomagnesium compound.

16. (original): The process according to Claim 15,

wherein tert-butylmagnesium chloride is used as the tert-butylmagnesium halide.

Preliminary Amendment
National Stage of PCT/JP2004/005465

17. (currently amended): The process according to claim 13~~any one of Claims 13 to 16,~~

wherein R⁵ is phenyl group.

18. (currently amended): The process according to claim 13~~any one of Claims 13 to 16,~~

wherein R⁵ is isopropyl group.

19. (currently amended): The process according to claim 13~~any one of Claims 13 to 18,~~

wherein M is a sodium atom.

20. (currently amended): The process according to claim 13~~any one of Claims 13 to 19,~~

wherein R⁶ is methyl group.

21. (currently amended): The process according to claim 13~~any one of Claims 13 to 20,~~

wherein the step (b) is carried out in the presence of not less than 1.0 mole, per mole of the compound represented by the formula (3), of R⁶OH.

22. (currently amended): The process according to claim 13~~any one of Claims 13 to 21,~~

wherein the compound represented by the formula (2) is in an optically active form.

23. (currently amended): The process according to claim 13~~any one of Claims 13 to 22,~~

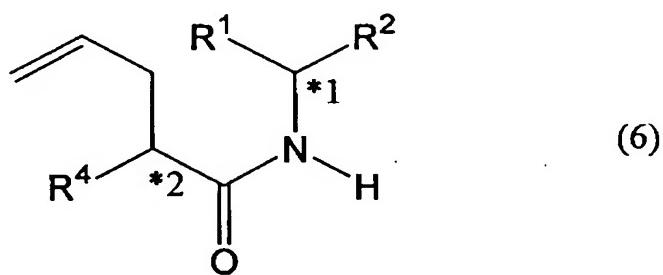

wherein the hydrolysis in step (c) is carried out using an enzyme source capable of causing asymmetric hydrolysis.

24. (currently amended): The process according to Claims 23,
wherein the enzyme source is an enzyme source derived from a microorganism belonging to the genus Candida, Humicola, Mucor, Pseudomonas, Rhizopus, Brevundimonas, Cellulomonas, Jensenia, Rhodococcus, Saccharomycopsis or Trichosporon.

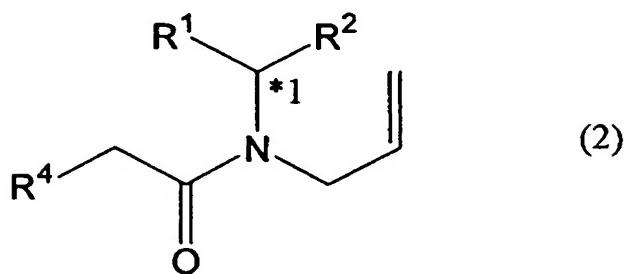

25. (currently amended): The process according to Claims 23,
wherein the enzyme source is an enzyme source derived from Candida antarctica, Candida lipolitica, Candida cylindracea, Candida rugosa, Humicola sp., Humicola lanuginosa, Mucor meihei, Mucor javanicus, Pseudomonas sp., Rhizopus delemar, Rhizopus javanicus, Brevundimonas diminuta, Cellulomonas fimi, Jensenia canicruria, Rhodococcus erythropolis,

Candida pini, Saccharomycopsis selenospora, Trichosporon cutaneum or Trichosporon
debeurmannianum.

26. (original): A process for producing a 2-allylcarboxamide derivative
represented by the following formula (6);

wherein R¹, R² and R⁴ each independently represents a substituted or unsubstituted alkyl group containing 1 to 18 carbon atoms, a substituted or unsubstituted aryl group containing 6 to 20 carbon atoms or a substituted or unsubstituted aralkyl group containing 7 to 20 carbon atoms and *1 and *2 each indicates that the carbon atom marked therewith is an asymmetric carbon atom;,
which comprises reacting a carboxamide compound represented by the following
formula (2)

wherein R¹, R², R⁴ and *1 are as defined above;

with an organometallic compound.

27. (currently amended): The process according to Claims 26,
wherein the compound represented by the formula (2) is in an optically active form.

28. (currently amended): The process according to Claim 26 or 27,
wherein an organomagnesium compound is used as the organometallic compound.

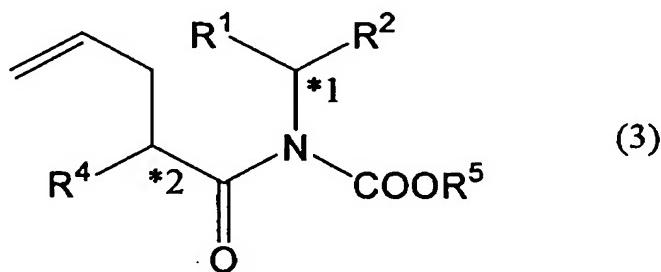

29. (original): The process according to Claim 28,
wherein a tert-butylmagnesium halide is used as the organomagnesium compound.

30. (original): The process according to Claim 29,
wherein tert-butylmagnesium chloride is used as the tert-butylmagnesium halide.

31. (currently amended): The process according to claim 26 or any one of Claims 26 to 30,

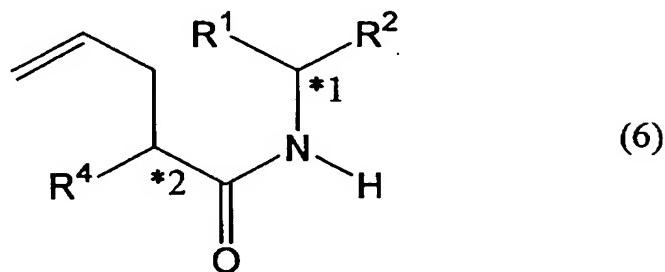

wherein the compound represented by the formula (6) is recrystallized from a solvent to increase the diastereomeric excess thereof.

32. (original): A process for producing a 2-allylcarboxamide derivative represented by the following formula (3);

wherein R¹, R², R⁴ and R⁵ each independently represents a substituted or unsubstituted alkyl group containing 1 to 18 carbon atoms, a substituted or unsubstituted aryl group containing 6 to 20 carbon atoms or a substituted or unsubstituted aralkyl group containing 7 to 20 carbon atoms, and *1 and *2 each indicates that the carbon atom marked therewith is an asymmetric carbon atom;

which comprises reacting a compound represented by the following formula (6);

wherein R¹, R², R⁴, *1 and *2 are as defined above;

in the presence of a base and further with a compound represented by the formula;

ClCOOR⁵

wherein R⁵ is as defined above.

33. (original): The process according to Claim 32,

wherein an alkali metal compound or an alkaline earth metal compound is used as the base.

34. (original): The process according to Claim 33,

wherein sodium hydride is used as the alkali metal compound.

35. (original): The process according to Claim 33,

wherein an organomagnesium compound is used as the alkaline earth metal compound.

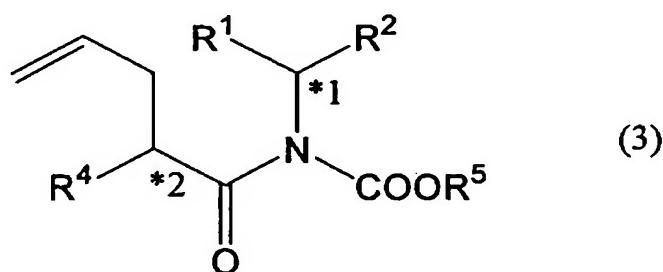

36. (original): The process according to Claim 35,
wherein a tert-butylmagnesium halide is used as the organomagnesium compound.

37. (original): The process according to Claim 36,
wherein tert-butylmagnesium chloride is used as the tert-butylmagnesium halide.

38. (currently amended): The process according to claim 32~~any one of Claims 32 to 37~~,
wherein R⁵ is phenyl group.

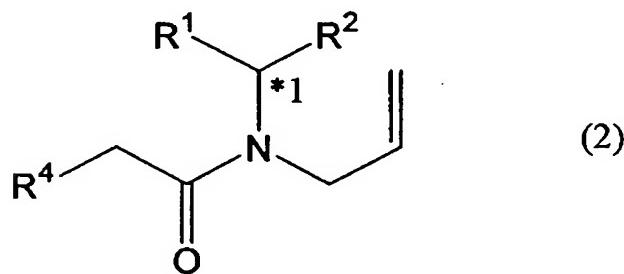

39. (currently amended): The process according to claim 32~~any one of Claims 32 to 37~~,
wherein R⁵ is isopropyl group.

40. (original): A process for producing a 2-allylcarboxamide derivative
represented by the following formula (3);

wherein R¹, R², R⁴ and R⁵ each independently represents a substituted or unsubstituted alkyl group containing 1 to 18 carbon atoms, a substituted or unsubstituted aryl group containing 6 to 20 carbon atoms or a substituted or unsubstituted aralkyl group containing 7 to 20 carbon atoms, and *1 and *2 each indicates that the carbon atom marked therewith is an asymmetric carbon atom;

which comprises reacting a carboxamide compound represented by the following formula (2);

wherein R¹, R², R⁴ and *1 are as defined above;

with an organometallic compound and further with a compound represented by the formula;
ClCOOR⁵

wherein R⁵ is as defined above.

Preliminary Amendment
National Stage of PCT/JP2004/005465

41. (original): The process according to Claim 40,
wherein an organomagnesium compound is used as the organometallic compound.

42. (original): The process according to Claim 41,
wherein a tert-butylmagnesium halide is used as the organomagnesium compound.

43. (original): The process according to Claim 42,
wherein tert-butylmagnesium chloride is used as the tert-butylmagnesium halide.

44. (currently amended): The process according to claim 40~~any one of Claims 40 to 43,~~
wherein R⁵ is phenyl group.

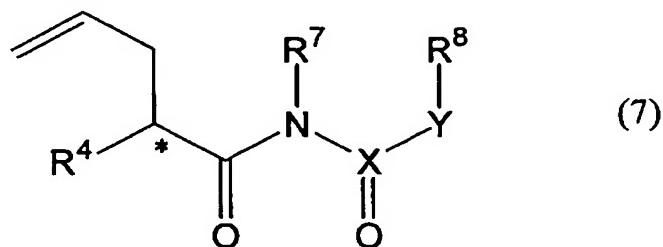

45. (currently amended): The process according to claim 40~~any one of Claims 40 to 43,~~
wherein R⁵ is isopropyl group.

46. (original): A process for producing a 2-allylcarboxylic acid represented by the
following formula (8);

wherein R^4 represents a substituted or unsubstituted alkyl group containing 1 to 18 carbon atoms, a substituted or unsubstituted aryl group containing 6 to 20 carbon atoms or a substituted or unsubstituted aralkyl group containing 7 to 20 carbon atoms, R^9 represents a hydrogen atom or a substituted or unsubstituted alkyl group containing 1 to 20 carbon atoms, and * indicates that the carbon atom marked therewith is an asymmetric carbon atom or an ester derivative thereof;

which comprises reacting a 2-allylcarboxamide derivative represented by the following formula (7);

wherein R⁴ is as defined hereinabove, R⁷ and R⁸ each represents a substituted or unsubstituted alkyl group containing 1 to 18 carbon atoms, a substituted or unsubstituted aryl group containing 6 to 20 carbon atoms or a substituted or unsubstituted aralkyl group containing 7 to 20 carbon atoms and R⁷ and R⁸ may be bound together to form a ring, X represents C, S or S (O), Y represents CH, O or NH and * is as defined hereinabove;
with a compound represented by the formula MOR⁹
wherein M represents an alkali metal and R⁹ is as defined hereinabove
and,
if necessary, hydrolyzing the resulting ester.

47. (original): The process according to Claim 46,
wherein M is a sodium atom.

48. (currently amended): The process according to Claim 46 or 47,
wherein R⁹ is methyl group.

49. (original): A process for producing an optically active 2-allylcarboxylic acid represented by the following formula (5);

wherein R⁴ represents a substituted or unsubstituted alkyl group containing 1 to 18 carbon atoms, a substituted or unsubstituted aryl group containing 6 to 20 carbon atoms or a substituted or unsubstituted aralkyl group containing 7 to 20 carbon atoms, and *2 indicates that the carbon atom marked therewith is an asymmetric carbon atom;

which comprises causing an enzyme source having asymmetric hydrolysis activity to act on a 2-allylcarboxylic acid ester derivative represented by the following formula (4);

wherein R⁴ is as defined hereinabove, R⁶ represents a substituted or unsubstituted alkyl group containing 1 to 20 carbon atoms, and *2 is as defined hereinabove;
and

collecting the resulting optically active 2-allylcarboxylic acid.

50. (original): The process according to Claim 49,

wherein the compound represented by the formula (4) is in a racemic form.

51. (original): The process according to Claim 49,

wherein the compound represented by the formula (4) is in an optically active form.

52. (original): A process for producing an optically active 2-allylcarboxylic acid ester represented by the following formula (4);

wherein R⁴ represents a substituted or unsubstituted alkyl group containing 1 to 18 carbon atoms, a substituted or unsubstituted aryl group containing 6 to 20 carbon atoms or a substituted or unsubstituted aralkyl group containing 7 to 20 carbon atoms, R⁶ represents a substituted or unsubstituted alkyl group containing 1 to 20 carbon atoms, and *2 indicates that the carbon atom marked therewith is an asymmetric carbon atom;

which comprises causing an enzyme source having asymmetric hydrolysis activity to act on a 2-allylcarboxylic acid ester derivative represented by the formula (4) given above and collecting the unreacted optically active 2-allylcarboxylic acid ester.

53. (original): The process according to Claim 52,

wherein the compound represented by the formula (4) is in a racemic form.

54. (original): The process according to Claim 52,

wherein the compound represented by the formula (4) is in an optically active form.

55. (currently amended): The process according to claim 49~~any one of Claims 49 to 54,~~

wherein R⁶ is methyl group or ethyl group.

56. (currently amended): The process according to claim 49~~any one of Claims 49 to 55,~~

wherein the enzyme is an enzyme source derived from a microorganism belonging to the genus Candida, Humicola, Mucor, Pseudomonas, Rhizopus, Brevundimonas, Cellulomonas, Jensenia, Rhodococcus, Saccharomyces or Trichosporon.

57. (currently amended): The process according to claim 49~~any one of Claims 49 to 55,~~

wherein the enzyme source is an enzyme source derived from Candida antarctica, Candida lipolitica, Candida cylindracea, Candida rugosa, Humicola sp., Humicola lanuginosa, Mucor meihei, Mucor javanicus, Pseudomonas sp., Rhizopus delemar, Rhizopus javanicus, Brevundimonas diminuta, Cellulomonas fimi, Jensenia canicruria, Rhodococcus erythropolis,

Preliminary Amendment
National Stage of PCT/JP2004/005465

Candida pini, *Saccharomycopsis selenospora*, *Trichosporon cutaneum* or *Trichosporon debeurmannianum*.
